

Nevada Conservation Credit System

Crawford Credit Project

Property Manager:

Project Statistics

Maximum Map Unit Size: 1,525.23

Number of Map Units: 42

Average Habitat Functionality: 0.6788

Date Printed:

Sources: Esri, HERE, Garmin, Intermap, increment P Corp., GEBCO, USGS, FAO, NPS, NRCAN, GeoBase, IGN, Kadaster NL, Ordnance Survey, Esri Japan, METI, Esri China (Hong Kong), (c) OpenStreetMap contributors, and the GIS User Community

Credits Per Map Unit

This graph shows the current and projected uplift on each Map Unit as entered in the Credit Calculator. The labels indicate the max number of credits, regardless of it they are current on predicted.

As shown, Map Unit 19 has the greatest total number of credits, with 817 current credits

Credits Per Map Unit Based on Ideal Management Regime

This graph shows the projected credits for each Map Unit based on the ideal management regime.

These 'idealized' credits are compared to the maximum credits in the calculator (either predicted or current). As shown, Map Unit 19 has the greatest total number of credits, with 902 current credits, if Restoration Management Scenarion 5 (High Effort Level) is used

Management Regime #1

The graph above compares current, predicted, and modelled credit creation opportunities across the project site. The left-most bars represent different levels of effort of this management regime

The table below captures the Map Units that will be most improved by this management regime, and shows the number of credits predicted under each effort level.

The barchart below shows the same information, but in credits per acre in order to normalize the effect of total number of acres.

Map Unit and Percent Increase Based on Effort LevelCredits/Acre Created for Each Effort Level

MU	Current Credits	Projected Credits	Low Effort	Medium Effort	High Effort
10.0	91.94	340.02	128.07	384.22	418.8
1.0	0.0	240.16	52.83	264.17	309.08
12.0	0.0	233.96	88.12	264.37	274.95
